

Grading!

- 50% - March 22 final project (report and presentation)
- 10% Class participation (exercises)
- 20% Assignments (January 22, etc.)
- 20% report (February 15) and presentation (Feb 22) from your topic of interest

Hints for Personalized Report

Focus on the following:

- 1. What does [this technology/artefact] enhance or intensify?
- 2. What does it render obsolete or displace?
- 3. What does it retrieve that was previously obsolesced?
- 4. What does it produce or become when pressed to an extreme?

For final report

- By February 1 have ready a draft of your 3 page report, underlining the topic, purpose of the technology and how you intend to design it.
- Both in your final project report and presentation you should explain how context-awareness is managed and present at least the 'class diagram' of your implementation using concepts learned at class (more details as we go along with the material...).
